

14th March 2018

Advanced Bionics is excited to announce that the **new HiRes™ Ultra cochlear implant** is available in Australia.

Built on the proven HiRes electronics system, the new HiRes Ultra implant is an MRI compatible and low profile implant that exceeds industry standards for impact resistance. The HiRes Ultra implant will feature the thinnest styleted precurved electrode designed to be placed mid scala in the Scala tympani to protect the delicate structures of the cochlea, the HiFocus™ Mid-Scala electrode. HiRes™ Ultra cochlear implant has received approval from the FDA, TÜV, and TGA.

Everyone at AB remains dedicated to making a difference in the lives of those impacted by hearing loss.

Sincerely,

A handwritten signature in black ink, appearing to read 'Jade Parr', written in a cursive style.
